Index to

The Welding Journal

Volume 31—1952

Published by the American Welding Society, 33 West 39th Street, New York 18, N. Y.

(a) The Welding Journal

This part includes general technical articles, papers presented before Section and National meetings, articles for the practical welder and designer, news, biographical items, current welding literature and advertising.

Page allocation by issues

January	1– 90	July	543– 638
February	91–186	August	639– 752
March	187–284	September	753– 874
April	285–380	October	875–1002
May	381–462	November	1003–1104
June	463–542	December	1105–1200

(b) Welding Research Supplement

This section includes the reports of the Welding Research Council, critical digests of the literature, reports of the Project Committees and research reports of industry.

Page allocation by issues

January	1-s– 64-s	July	321-s–360-s
February	65-s–112-s	August	361-s–392-s
March	113-s–168-s	September	393-s–440-s
April	169-s–232-s	October	441-s–504-s
May	233-s–272-s	November	505-s–560-s
June	273-s–320-s	December	561-s–624-s

(a) THE WELDING JOURNAL

Subject Index

Adams Lecture—The Welding of Copper by the Inert Metal Arc Process—John J. Chyle, 663–686.
Aeronautical Spot and Seam Welding Specifications—J. Maltz and N. E. Promisel, 561–566.
Aircraft Components Flash Welded—J. H. Cooper, 109–115.
Aircraft Components, Fusion Welding Techniques for—Arnold S. Rose and Morton A. Braun, 1121–1128.
Aircraft Gas Turbines, Welding Characteristics of Materials for—A. J. Rosenberg, 407–414.
Aircraft Spot Welding, Problems and Equipment in—J. R. Fullerton, 586–591.
Aluminum Bronze Filler Metals, Strength of Joints to Steel—Willis G. Groth and Robert E. Maersch, 1042–1048.
Aluminum Bronze, Welding Iron-Bearing Alpha—F. Emery Garriott, 18–28.
Aluminum Resistance Welding Using Slope Control—R. E. Kemp, 687–691.
Aluminum Spot Taper Control in Spot Welding—I. W. Johnson, 549–551.
Austrian Welding Standards—Hans Melhardt, 592–595.

Brazed Joints for High-Temperature Application, Design Properties of—R. L. Peaslee and W. M. Boam, 651–662.
Brazing Filler Metals, Tentative Specifications for—645–650.
Brazing Joint Design for—W. J. Van Natten, 1023–1028.
Brazing, Production—J. Raymond Wirt, 759–764.
Brazing and Related Techniques, Surface Alloying in—Robert Humphrey and R. D. Wasserman, 1135–1140.
Bronze Filler Metals, Strength Joints to Steel with Aluminum—Willis G. Groth and Robert E. Maersch, 1042–1048.
Bronze, Welding Iron-Bearing Alpha Aluminum—F. Emery Garriott, 18–28.

Casting Steel, Recommended Practice for the Welding of—315–322.
Chromium Molybdenum Steel Pipe, Arc Welding of—J. Bland, L. J. Privoznik and F. J. Winsor, 783–791.
Copper Welding by the Inert-Gas Metal-Arc Process—Adams Lecture—John J. Chyle, 663–686.
Corrosion of Structural Spot Welds—B. Karnisky, E. Kinelski and E. Gruca, 903–916.
Cutting of Defense Equipment Materials—A. H. Yoch, 217–230.
Cutting and Flame Hardening—Archer B. Jones, 469–474.
Cutting Heavy Scrap in the Steel Mill—L. P. Elly, 97–101.

Design of Products for Welding—John Mikulak, 29–34.
Designing for Structural Welding, How to Save Cost by—A. E. Pearson, 1129–1135.
Distortion Control in Structural Fabrication—Gordon Cape and Llewellyn Jehu, 1009–1016.

Electrodes Heat Treat Properties of Low Hydrogen Weld Metals—D. C. Smith and W. G. Rinehart, 296–305.

Filler Metals, Brazing, Proposed Specifications for—645–650.
Flame Hardening and Production Cutting—Archer B. Jones, 469–474.
Flame Hardening Turret Ball Races—B. A. Schevo and Z. J. Fabrykowski, 699–703.
Flash Butt Welding of High-Temperature Alloys—I. A. Oehler, 230–232.
Flash Welding of Components for Aircraft and Similar Applications—J. H. Cooper, 109–115.

Hard Facing Alloys of the Chromium Carbide Type—H. S. Avery and Henry J. Chapin, 917–930.
Hard Facing for Impact—Howard S. Avery, 116–145.
Hardening Rail Ends, Control of—La Motte Grover, 7–17.
Heat Exchangers for the Chemical Industry—J. W. Mortimer, 387–392.
Heat-Resistant Materials, Welding of—J. L. Solomon, 233–238.

Inert Arc Welding—Thoriated Tungsten Electrodes—G. J. Gibson and R. O. Seitz, 102–108.
Inert-Gas Arc Shields, Schlieren Analysis of—W. B. Moen and G. J. Gibson, 208–213.
Inert Gas Metal Arc Welding of Copper—Adams Lecture—John J. Chyle, 663–686.
Inert Gas Metal Arc Welding, Metal Transfer in—R. T. Breymeier, 393–399.
Inert-Gas-Shielded Arc Consumable Electrode Welding—H. E. Rockefeller, 575–586.

Jet Aircraft Components, Fusion Welding Techniques for—Arnold S. Rose and Morton A. Braun, 1121–1128.
Jet Aircraft Gas Welding of High-Resistant Materials—J. L. Solomon, 233–238.

Low Hydrogen Electrode Weld Metals, Heat Properties of D. C. Smith and W. G. Rinehart, 296–305.

Magnetic Force Welding—Myron Zucker and G. Cubitt-Smith, 1141–1153.

Metal Transfer in Sigma Welding—R. T. Breymeier, 393–399.
Metallized Coatings Development Fused—Harrison S. Sayre, 35–39.
Metallizing, Modern Developments in—Sam Tour, 199–207.
Metallizing Process—F. Keller, 291–295.
Metallizing Systems to Prevent Marine Corrosion—H. Vanderpool, 791–798.
Multispot Production with Limited Power Supply—C. R. Whitney, Jr., 1029–1034.

Nitrogen Content and Low-Temperature Brittleness of Steel—474–475.

Operator Selection and Training for Defense Program—A. N. Kugler, 40–42.
Oxygen Cutting of Defense Equipment Materials—A. H. Yoch, 217–230.
Oxygen/Nitrogen Plant—J. F. Brinley, 495–499.

Pipe—The Arc Welding of Low Chromium-Molybdenum Steel—J. Bland, L. J. Privoznik and F. J. Winsor, 783–791.
Pipe Material, New Rules for Welding Low-Alloy Ferritic—Commander Charles F. Perry, 898–902.
Pipe Weld Normalizing and Stress Relieving—C. A. Anderson, D. H. Corey and H. J. Denman, 324–329.

Practical Welder and Designer
Aluminum Gates and Ramps for Stock Yards are Heliarc Welded—501.
Aluminum Hatch Covers Fabricated by Sigma Welding—W. F. Ruehl, 240–241.
Automotive—Large-Scale Welding Done on Chevrolet Front Members—L. E. Feeney, 1154–1156.

Band-Saw Blades Welded—703.
Bike Repair in the Welding Shop—A. Rothschild, 824–825.
Body Repair Hints for the Shop—C. E. Bland, 809–810.
Braze Welding, Back to Work Because of—R. L. Fuller, 1057–1058.
Braze Welding Cast Iron—H. D. Drummond, 148–151.
Braze Welding, Principles of—H. K. Schmuck, 954.
Brazed Windows—241.
Bridge, Railroad, Welded in Switzerland—M. Frei, 1052–1054.
Bronze-Surfacing, Hints for—W. O. Whitehead, 419.

Cast Iron, Brazed—H. D. Drummond, 148–151.
Casting Repaired Economically by Arc Cutting and Brazing—423.
Cladding of Mild Steel Roll by Unionmelt, Series-Arc Technique—J. F. Collins, H. I. Shrubsall and J. L. Wilson, 1050–1054.
Cutting Heavy Steel Sections—G. E. Kabacy, 705–707.

Distortion Correction—Heating with Oxyacetylene Flame—E. H. Frail, 596–600.
Distortion—Heating Helps Shrink Stretched Metal—W. Purcell, 418–419.
Distortion, Welding Sequence Prevents—F. C. Geibig, 339.
Drill Press from Electric Drill—E. L. Dreher, 239–240.
Drilling Holes Fast Way—A. W. Anderson, Jr., 242–243.
Drilling Mast Construction Simplified by Welding—C. O. Planting, 810–813.

Finishing Costs Cut—820–821.
Fixture for Diesel A-Frame Welding—C. D. Lentz, 420.
Flame Plating—945–950.
Flash Welding of Titanium Alloys—I. A. Oehler, 950–951.
Flux Recovery Setup—243.

Galvanized Metal, Improved Welds for—944.

Hard Facing Crusher Parts by Submerged Arc Welding—152.
Hard Facing, How to Do—P. C. Peck, 48–49.
Hard-Facing Spiral Surfaces—G. E. Kabacy, 340.
Horton Multisphere, The—Christian Arne, 146–147.

Incinerator, Portable—1156.

Jet Engine Components—Four at One Blow—53.

Lathe Welded—704.
Loading Ramp—F. C. Geibig, 707.

Metallizing—Fourteen Hundred Dollars Saved in Eight Hours—595.

Nickel-Bronze Gear Repaired by Inert-Gas-Shielded Arc Welding—425.

Plate Edge Preparation in 12-Ft. Diameter Tank Heads with Oxyacetylene—49.
Plow Share Points Replaced—L. M. Smith, 500–501.
Powder Cutting Halves Five Billets per Minute—951.

Radiant Heating, Hints on—R. G. Harner, 417–418.
Rail-Cutting Aids Road Improvement—1056.
Recording Voltmeter Checks Quality of Automatic Welds—G. A. Hatfield, 600–601.
Refinery Welding—C. G. Herbruck, 337–339.
Remove Buttonhead Rivets with Your Blowpipe—D. T. Kelley, 415–416.
Repair Overcomes Replacement Problems—421.

Safe Devices for Handling Cylinders—J. C. McMills, 332–333.
Scrap Cutting, Turntable Speeds Heavy—421–422.
Sigma Welding Equipment, Portable—953.
Silver Brazing Jobs—K. R. Shepard, 424–425.
Silver Brazing of Stainless Steel, Hints for—J. P. Emmerich, 50–53.
Spot Welding—Kilowatts Don't Weigh Anything—W. P. Brotherton, 334–336.
Stainless Steel, Hints for Brazing of—J. P. Emmerich, 50–53.
Steel Gondolas Built on Assembly Line—H. B. Martin and Michael J. Zevada, 814–819.
Stud Welding Saves Time—1049–1050.

Tanks—The Horton Multisphere—Christian Arne, 146–147.
Titanium—330–331.
Titanium Alloys Flash Welded—I. A. Oehler, 950–951.
Tractor Rolls Rebuilt by Submerged Arc Welding—416.
Tractor Trailer—Welded Build-Up of Worn Spoke Surfaces L. J. MacLennan, Jr., 952–953.
Tow Carts Fabricated by Inert-Gas Metal-Arc Welding—1059.

Weld Design, Elements of—821–823.
Worn Surfaces, New Life for—D. E. Lytle, 1054–1056.

Preheating for Welding—A. B. Tesmen, 306–313.
Pressure Vessels—Welding Heat Exchangers for the Chemical Industry, 387–392.

Rail-End Hardening—La Motte Grover, 7–17.
Railroads—Oxyacetylene Welding and Cutting as Applied to—W. D. Waldron, 486–491.
Refrigerator Welding Light Gage Tubing in Gas—J. A. Ritter, 552–560.
Resistance and Arc Welding Conference—B. E. Rossi, 491–494.
Resistance and Fusion Welding of Titanium and Its Alloys—E. F. Holt and W. H. Moore, 213–216.
Resistance Variations During Spot Welding—Discussion by H. Udin, 322–323.
Resistance Welder Maintenance in High Assembly Lines—James F. Salatin and O. D. Etchison, 799–808.
Resistance Welding Quality Control—T. J. Lepito and R. M. Taylor, 692–698.
Resistance Welding Under Government Specifications, Process Control for—F. G. Harkins, 567–574.

School Welding Shops, Tentative Standards for—Carl H. Turnquist, 43–47.
Scrap Cutting Heavy in the Steel Mill—L. P. Elly, 97–101.
Seam Welding Containers Automatically—Discussion by R. H. Blair, 207.
Seam Welding Specifications, Military Aeronautical—J. Maltz and N. E. Promisel, 561–566.
Ships, Failures and Defects Encountered in the Construction of Welded—R. D. Bradway, 1111–1121.
Ships—Observation on Experience with Welded—David P. Brown, 765–782.
Slope Control, Production Welding 24ST3 Aluminum—R. E. Kemp, 687–691.
Slope Taper Control in Spot Welding 24ST Aluminum—I. W. Johnson, 549–551.
Soldering Practices, Technical Aspects of—R. M. MacIntosh, 881–897.
Spot- and Seam-Welding Specifications, Military Aeronautical—J. Maltz and N. E. Promisel, 561–566.
Spot Weld Properties, Expression of—Julius Heuschkel, 931–943.
Spot Welding Electrodes, Effects of Nose Design on—E. F. Holt and L. W. Sink, 400–406.
Spot Welding in a Job Shop, Quality Control for—Peter G. Poetto, 1017–1022.
Spot Welding—Magnetic Force Welding—Myron Zucker and G. Cubitt-Smith, 1141–1153.
Spot Welding, Problems and Equipment in Aircraft, J. R. Fullerton, 586–591.
Spot Welding 24ST Aluminum Slope Taper Control in—I. W. Johnson, 549–551.
Spot Welds, Corrosion of Structural—B. Karnisky, E. Kinelski and E. Gruca, 903–916.
Steel Casting, Recommended Practice for the Welding of—315–322.
Steel Mill Maintenance Welding During a Defense Period—R. L. Deily, 476–478.

Structural Fabrication, Distortion Control in—Gordon Cape and Llewellyn Jehu, 1009–1016.
Structural Steel Surface, Conditioning of—R. E. Somers and H. C. von Blohn, 193–198.
Structural Welding, How to Save Cost by Designing for—A. E. Pearson, 1129–1135.
Submerged Arc Welding with Three-Phase Power—E. A. Clapp and R. G. Schreiner, 479–485.
Surface Conditioning of Structural Steel—R. E. Somers and H. C. von Blohn, 193–198.
Thoriated-Tungsten Electrodes—Their Welding Characteristics and Applications—G. J. Gibson and R. O. Seitz, 102–108.
Titanium, Forming and Welding of—F. H. Stevenson, 1035–1041.
Training—Should Welding Be on Its Own in Education?—Discussion by Donald S. Clark, 313–314,
Training Welding Operators for Defense Program—A. N. Kugler, 40–42.

(b) WELDING RESEARCH SUPPLEMENT

Subject Index

Aircraft Steels, Studies of the Crack Sensitivity of—A. W. Steinberger and J. Stoop, 527-s to 542-s.
Aluminum Alloy Plate, Strength and Ductility of Welds in—F. G. Nelson, Jr., and F. M. Howell, 397-s to 402-s.
Aluminum Alloy Spot-Welded Joints, Fatigue Tests on—Marshall Holt and E. C. Hartmann, 183-s to 187-s.
Aluminum Alloy Weldments, Factors Which Determine the Performance of—W. R. Apblett, Jr., C. R. Felmley and W. S. Pellini, 596-s to 606-s.
Aluminum Alloys, Weld Cracking of—J. D. Dowd, 448-s to 456-s.
Arc Studies—Melting Rate of Coated Electrodes—J. ter Berg and A. Larigaldie, 268-s to 271-s.
Arcs, Inert-Gas Shielding of—William L. Green and Robert J. Krieger, 582-s to 586-s.
Biaxial Fatigue Tests on Flat-Plate Specimens—R. U. Blaser, J. T. Tucker, Jr., and L. F. Kooistra, 161-s to 168-s.
Brazing, High-Strength Vacuum, of Clad Steels—R. C. Bertossa, 441-s to 447-s.
Brazing Hydromechanics—E. R. Funk and H. Udin, 310-s to 316-s.
Brazing—Surface Tension and the Joining of Metals—E. R. Funk and H. Udin, 247-s to 252-s.
Brittle Fracture, Effect of Strain-Rate on Twinning and—D. Rosenthal and C. C. Woolsey, Jr., 475-s to 492-s.
Brittle Fracture in Structural Steels, Initiation and Propagation of—Peter P. Puzak, Earl W. Eschbacher and William S. Pellini, 561-s to 581-s.
Brittle Strength and Transition Temperature of Structural Steel—W. C. Hoeltje and N. M. Newmark, 515-s to 521-s.

Charpy Tests, Upper and Lower Transitions in: Discussion—R. W. Vanderbeck, 201-s to 202-s; Discussion—W. P. Roop, 202-s to 203-s; Authors' Reply, 203-s to 204-s.
Chromium Recovery During Submerged-Arc Welding—James G. Kerr and David A. Elmer, 431-s to 438-s.
Circular-Patch Weld Test, Evaluation of the—John E. Hockett and L. O. Seaborn, 387-s to 392-s.
Circular-Patch Weld-Test Specimens, Stresses in—Alan V. Levy and Harry E. Kennedy, 402-s to 405-s.
Clad Steels, High-Strength Vacuum Brazing of—R. C. Bertossa, 441-s to 447-s.
Clad Steels, Stainless—Helmut Thielsch, 142-s to 160-s.
Clevage Fracture in Steel, Nature of—H. M. Miekk-oja, 493-s to 501-s.
Contact Resistance—Wm. B. Kouwenhoven and Clarence W. Little, 457-s to 465-s.
Creep and Stress-to-Rupture Properties of Pressure Vessel Steels—R. D. Wylie and H. Thielsch, 11-s to 19-s.

Dilastrain Method for Determining Endurance Limit—36-s, 64-s.
Dimensional Effects in Fracture—C. W. MacGregor and N. Grossman, 20-s to 26-s; Discussion—Wendell P. Roop, 271-s; Authors' Reply, 271-s to 272-s.
Dissimilar Metal Joints—Stainless-Steel Weld Deposits on Mild and Alloy Steels—Helmut Thielsch, 37-s to 64-s.
Dissimilar Metals, Welded Joints Between, in High-Temperature Service—R. W. Emerson and W. R. Hutchinson, 126-s to 141-s.

Electrodes, Melting Rate of Coated—J. ter Berg and A. Larigaldie, 268-s to 271-s.

Fabrication Processes, Effect of, on Steels Used in Pressure Vessels; Discussion—W. B. Brooks, 19-s; Authors' Reply, 19-s; Discussion—Jonathan Jones, 26-s; Author's Reply, 26-s.
Fatigue—Repeated Load Tests on Welded and Prestrained Steels—Sadun S. Tör, Jan M. Ruzek and Robert D. Stout, 238-s to 246-s.
Fatigue Strength of Panels with Welded Angle Stiffeners—R. Weck, 338-s to 349-s.
Fatigue Strength of Welded Joints—W. Soete and R. Van Crombrugge, 100-s to 103-s.
Fatigue—Stress Concentrations in Steel Under Cyclic Load—E. Orowan, 273-s to 282-s; Discussion—Wendell P. Roop, 502-s to 503-s; Author's Reply, 503-s to 504-s.
Fatigue Tests, Biaxial, on Flat-Plate Specimens—R. U. Blaser, J. T. Tucker, Jr., and L. F. Kooistra, 161-s to 168-s.
Fatigue Tests of Arc-Welded Joints—H. de Leiris and H. Dutilleul, 104-s.
Fatigue Tests on Aluminum Alloy Spot-Welded Joints—Marshall Holt and E. C. Hartmann, 183-s to 187-s.
Fellowships on the Fundamental Sciences Related to Welding—111-s to 112-s.
Flame Studies and Their Relationship to Welding Equipment—James A. Browning and Merle L. Thorpe, 465-s to 468-s.
Flash Welding, The Suitability of Various Steels for—Erick Hormann, 318-s to 320-s.
Fracture, Dimensional Effects in—C. W. MacGregor and N. Grossman, 20-s to 26-s; Discussion—Wendell P. Roop, 271-s; Authors' Reply, 271-s to 272-s.
Fracture Initiation and Propagation in Welded Ship Steels—P. J. Rieppel and C. B. Voldrich, 188-s to 197-s; Discussion—W. H. Wooding, 198-s to 200-s; Authors' Reply, 200-s; Discussion—W. S. Pellini, 200-s to 201-s; Authors' Reply, 201-s.
Fracturing and Fracture Dynamics—G. R. Irwin and J. A. Kies, 95-s to 100-s.

Heat Flow in Welding—A. A. Wells, 263-s to 267-s.
High-Alloy Castings, Welding of—R. David Thomas, Jr., 27-s to 32-s.
High-Temperature Service, Welded Joints Between Dissimilar Metals in—R. W. Emerson and W. R. Hutchinson, 126-s to 141-s.
Hydrogen in Mild-Steel Weld Metal—A. L. Schaeffler, H. C. Campbell and H. Thielsch, 283-s to 309-s.

Inconel Sheet, Seam Welding of 0.005-In.—E. F. Nippes and John M. Gerken, 366-s to 370-s.
Inert Arc Welding—A Survey of Arc Welding in Gaseous Atmosphere—349-s to 352-s.
Inert-Gas Shielding of the Metallic Arc—William L. Green and Robert J. Krieger, 582-s to 586-s.

Liners, Stainless-Steel Applied—Helmut Thielsch, 321-s to 337-s.
Literature Review—Stainless-Steel Weld Deposits on Mild and Alloy Steels—Helmut Thielsch, 37-s to 64-s; Stainless Clad Steels—Helmut Thielsch, 142-s to 160-s; Hydrogen in Mild-Steel Weld Metal, 283-s to 309-s; Stainless-Steel Applied Liners—Helmut Thielsch, 321-s to 337-s.
Low-Alloy Steel Weld Metal, Temper Brittleness in—Richard P. Wentworth and Hallock C. Campbell, 505-s to 514-s.
Low-Alloy Steels for Pressure Vessels—Franz Nehl, 231-s to 232-s.
Low-Hydrogen Weld Metal Embrittlement—Peter P. Puzak and William S. Pellini, 521-s to 526-s.
Low-Temperature Properties of Ingot Iron, Effect of Strain-Temperature History on the—439-s to 440-s.

Micro-Mechanism of Fracture in the Tension Impact Test, Discussion—Glenn W. Geil, 230-s; Author's Closure, 230-s to 231-s.

Notch Sensitivity of Steel, The Effect of Quench-Aging on the—J. R. Low, Jr., 253-s to 256-s.

Openings in Structural Steel Members, Reinforced—D. Vasarhelyi and R. A. Hechtman, 169-s to 180-s; Discussion—Samuel T. Carpenter, 180-s; Discussion—W. P. Roop, 180-s to 181-s; Discussion—M. J. Letich, 181-s to 182-s; Authors' Closure, 182-s to 183-s.

Pipe—Effect of Stresses on the Strength of Circumferentially Welded Cylinders—L. J. Privoznik, 587-s to 595-s.
Piping—High-Temperature Service, Welded Joints Between Dissimilar Metals in—R. W. Emerson and W. R. Hutchinson, 126-s to 141-s.
Porosity in Mild Steel Weld Metal—Donald Warren and R. D. Stout, 381-s to 386-s; 406-s to 420-s; Discussion—D. L. Mathias, 586-s, 595-s; Authors' Reply, 606-s.
Preheat and Postheat for Submerged-Arc Welding—Clarence E. Jackson and Arthur E. Shrubsall, 1-s to 10-s.
Preheat vs. High-Temperature Stress Relief in the Codes—E. Paul DeGarmo, 393-s to 396-s.
Preheat vs. Low- and High-Temperature Stress-Relief Treatments—E. Paul DeGarmo, 233-s to 237-s.
Pressure Vessel Research Committee—492-s, 501-s.
Pressure Vessel Steels, Creep and Stress-to-Rupture Properties of—R. D. Wylie and H. Thielsch, 11-s to 19-s.
Pressure Vessel Steels—Repeated Load Tests on Welded and Prestrained Steels—Sadun S. Tör, Jan M. Ruzek and Robert D. Stout, 238-s to 246-s.
Pressure Vessel Steels, Transition from Ductile to Brittle Behavior in—T. N. Armstrong, N. A. Kahn and Helmut Thielsch, 371-s to 380-s; Discussion—Wendell P. Roop, 623-s; Authors' Reply, 623-s to 624-s.
Pressure Vessels—Biaxial Fatigue Tests on Flat-Plate Specimens—R. U. Blaser, J. T. Tucker, Jr., and L. F. Kooistra, 161-s to 168-s.
Pressure Vessels, Effect of Fabrication Processes on Steels Used in; Discussion—W. B. Brooks, 19-s; Author's Reply, 19-s; Discussion—Jonathan Jones, 26-s; Author's Reply, 26-s.
Pressure Vessels, Weldable Low-Alloy Steels for—Franz Nehl, 231-s to 232-s.
Projection Welding of Steel in Heavy Gages and in Dissimilar Thicknesses—Ernest F. Nippes and John M. Gerken, 113-s to 125-s.

Reinforcement of Openings in Structural Steel Members—D. Vasarhelyi and R. A. Hechtman, 169-s to 180-s; Discussion—Samuel T. Carpenter, 180-s; Discussion—W. P. Roop, 180-s to 181-s; Discussion—M. J. Letich, 181-s to 182-s; Authors' Closure, 182-s to 183-s.
Residual Stress and the Yield Strength of Steel Beams—Ching Huan Yang, Lynn S. Beedle and Bruce G. Johnston, 205-s to 229-s.
Resistance, Contact—Wm. B. Kouwenhoven and Clarence W. Little, 457-s to 465-s.

Seam Welding of 0.005-In. Inconel Sheet—E. F. Nippes and John M. Gerken, 366-s to 370-s.
Ship Fracture Problem, A Résumé of the—Finn Jonassen, 316-s to 318-s.
Ship Plate Steel, Ferrite-Grain-Size Measurements for—J. E. Campbell, R. H. Frazier and H. O. McIntire, 78-s to 90-s; Discussion—S. Epstein and W. P. Gerhart, 90-s to 92-s; Discussion—Stuart V. Arnold, 92-s; Discussion—K. J. Stodden and R. W. Vanderbeck, 92-s to 94-s; Authors' Closure, 94-s.
Ship Steels, Fracture Initiation and Propagation in Welded—P. J. Rieppel and C. B. Voldrich, 188-s to 197-s; Discussion—W. H. Wooding, 198-s to 200-s; Authors' Reply, 200-s; Discussion—W. S. Pellini, 200-s to 201-s; Authors' Reply, 201-s.
Ship Structure Committee—K. K. Cowart, 65-s to 67-s.
Ship Structure—Welded Reinforcement of Openings in Structural Steel Members—D. Vasarhelyi and R. A. Hechtman, 169-s to 180-s; Discussion—Samuel T. Carpenter, 180-s; Discussion—W. P. Roop, 180-s to 181-s; Discussion—M. J. Letich, 181-s to 182-s; Authors' Closure, 182-s to 183-s.

Ships—Stress Studies of Bulkhead Intersections for Welded Tankers—Wm. R. Campbell, L. K. Irwin and R. C. Duncan, 68-s to 75-s; Discussion—Wendell P. Roop, 75-s to 76-s; Discussion—James B. Robertson, Jr., 76-s; Discussion—John Vasta, 76-s; Authors' Reply, 77-s.
Ships—Welded Reinforcement of Openings; Discussion—Wiley E. Magee, 67-s, 77-s, 94-s.
Spot-Welded Joints, Fatigue Tests on Aluminum Alloy—Marshall Holt and E. C. Hartmann, 183-s to 187-s.
Spot Welding of Titanium Alloy Sheet—M. L. Begeman, E. H. Block, Jr., and Frank W. McBee, Jr., 469-s to 474-s.
Stainless Clad Steels—Helmut Thielsch, 142-s to 160-s.
Stainless-Steel Applied Liners—Helmut Thielsch, 321-s to 337-s.
Stainless-Steel Weld Deposits on Mild and Alloy Steels—Helmut Thielsch, 37-s to 64-s.
Straightening Structural Members in Place—Howard L. Harrison, 257-s to 262-s.
Strain-Rate Effect on Twinning and Brittle Fracture—D. Rosenthal and C. C. Woolsey, Jr., 475-s to 492-s.
Stress Concentrations in Steel Under Cyclic Load—E. Orowan, 273-s to 282-s; Discussion—Wendell P. Roop, 502-s to 503-s; Authors' Reply, 503-s to 504-s.
Stress Relief, Preheat vs. High-Temperature, in the Codes—E. Paul DeGarmo, 393-s to 396-s.
Stress-Relief Treatments, Preheat vs. Low- and High-Temperature—E. Paul DeGarmo, 233-s to 237-s.
Stress Studies of Bulkhead Intersections for Welded Tankers—Wm. R. Campbell, L. K. Irwin and R. C. Duncan, 68-s to 75-s; Discussion—Wendell P. Roop, 75-s to 76-s; Discussion—James B. Robertson, Jr., 76-s; Discussion—John Vasta, 76-s; Authors' Reply, 77-s.
Stresses, Effect of, on the Strength of Circumferentially Welded Cylinders—L. J. Privoznik, 587-s to 595 s.
Stresses in Circular-Patch Weld-Test Specimens—Alan V. Levy and Harry E. Kennedy, 402-s to 405-s.
Structural—Behavior of an Idealized Steel H Column Above the Elastic Range—Walter H. Weiskopf, 353-s to 360-s.
Structural—Column Strength Under Combined Bending and Thrust—Robert L. Ketter, Lynn S. Beedle and B. G. Johnston, 607-s to 622-s.
Structural—Connections for Welded Continuous Portal Frames—Lynn S. Beedle, A. A. Topractsoglou and Bruce G. Johnston, 543-s to 560-s.
Structural—Fatigue Strength of Panels with Welded Angle *Stiffeners—R. Weck, 338-s to 349-s.*
Structural Members, Straightening, in Place—Howard L. Harrison, 257-s to 262-s.
Structural—Residual Stress and the Yield Strength of Steel Beams—Ching Huan Yang, Lynn S. Beedle and Bruce G. Johnston, 205-s to 229-s.
Structural—Welded Continuous Frames: Plastic Design and the Deformation of Structures; Discussion—P. S. Symonds, 33-s to 36-s.
Submerged-Arc Welding, Predetermination of Preheat and Postheat for—Clarence E. Jackson and Arthur E. Shrubsall, 1-s to 10-s.
Temper Brittleness in Low-Alloy Steel Weld Metal—Richard P. Wentworth and Hallock C. Campbell, 505-s to 514-s.
Thermal Stress Relieving of High-Strength Ferritic Welds—Peter P. Puzak and William S. Pellini, 521-s to 526-s.
Titanium Alloy Sheet, Spot Welding of—M. L. Begeman, E. H. Block, Jr., and Frank W. McBee, Jr., 469-s to 474-s.
Transition from Ductile to Brittle Behavior in Pressure Vessel Steels—T. N. Armstrong, N. A. Kahn and Helmut Thielsch, 371-s to 380-s; Discussion—Wendell P. Roop, 623-s; Authors' Reply, 623-s to 624-s.
Transition Temperature of Structural Steel, Brittle Strength and—W. C. Hoeltje and N. M. Newmark, 515-s to 521-s.
Transition Temperatures—Dimensional Effects in Fracture—C. W. MacGregor and N. Grossman, 20-s to 26-s; Discussion—Wendell P. Roop, 271-s; Authors' Reply, 271-s to 272-s.
Transition Temperatures of Ship Plates, Ferrite-Grain-Size Measurements for—J. E. Campbell, R. H. Frazier and H. O. McIntire, 78-s to 90-s; Discussion—S. Epstein and W. P. Gerhart, 90-s to 92-s; Discussion—Stuart V. Arnold, 92-s; Discussion—K. J. Stodden and R. W. Vanderbeck, 92-s to 94-s; Authors' Closure, 94-s.
Transitions, Upper and Lower Charpy Test; Discussion—R. W. Vanderbeck, 201-s to 202-s; Discussion—W. P. Roop, 202-s to 203-s; Authors' Reply, 203-s to 204-s.
Twinning and Brittle Fracture, Effect of Strain-Rate on—D. Rosenthal and C. C. Woolsey, Jr., 475-s to 492-s.
Vacuum Brazing of Clad Steels—R. C. Bertossa, 441-s to 447-s.
Vibration of Weld Metal, Effect of—John W. Welty, 361-s to 366-s.
Weldability—Continuous Cooling Transformation of Weld Heat-Affected Zones—W. R. Apblett, L. K. Poole and W. S. Pellini, 421-s to 430-s.
Weldability—Crack Sensitivity of Aircraft Steels—A. W. Steinberger and J. Stoop, 527-s to 542-s.
Weldability—Evaluation of the Circular-Patch Weld Test—John E. Hockett and L. O Seaborn, 387-s to 392-s.
Weldability—Factors Which Determine Performance of Weldments; Discussion—R. H. Aborn, 141-s to 160-s; Authors' Reply, 160-s.
Weldability—Fracture Initiation and Propagation in Welded Ship Steels—P. J. Rieppel and C. B. Voldrich, 188-s to 197-s; Discussion—W. H. Wooding, 198-s to 200-s; Authors' Reply, 200-s; Discussion—W. S. Pellini, 200-s to 201-s; *Authors' Reply, 201-s.*
Weldability—Initiation and Propagation of Brittle Fracture in Structural Steels—Peter P. Puzak, Earl W. Eschbacher and William S. Pellini, 561-s to 581-s.
Weldability of Steels, Practical Testing of the Cohesive Strength and—W. A. Felix, 105-s to 111-s.
Weldability—Predetermination of Preheat and Postheat for Submerged-Arc Welding—Clarence E. Jackson and Arthur E. Shrubsall, 1-s to 10-s.
Weldability—Stresses in Circular-Patch Weld-Test Specimens—Alan V. Levy and Harry E. Kennedy, 402-s to 405-s.

Author Index

Aborn, R. H.—Discussion, "Investigation of Factors Which Determine Performance of Weldments," 141-s; Authors' Reply, 160-s.

KOUWENHOVEN, WM. B.—Contact Resistance, 457-s to 465-s.
KRIEGER, ROBERT J.—Inert-Gas Shielding of the Metallic Arc, 582-s to 586-s.

LARIGALDIE, A.—Melting Rate of Coated Electrodes, 268-s to 271-s.
LETICH, M. J.—Discussion, "Welded Reinforcement of Openings in Structural Steel Members," 181-s to 182-s.
LEVY, ALAN V.—Stresses in Circular-Patch Weld-Test Specimens, 402-s to 405-s.
LITTLE, CLARENCE W.—Contact Resistance, 457-s to 465-s.
LOW, J. R., JR.—The Effect of Quench-Aging on the Notch Sensitivity of Steel, 253-s to 256-s.

MACGREGOR, C. W.—Dimensional Effects in Fracture, 20-s to 26-s.
MAGEE, WILEY E.—Discussion, "Welded Reinforcement of Openings in Structural Steel Members," 67-s.
MATHIAS, D. L.—Discussion, "Porosity in Mild Steel Weld Metal," 586-s, 595-s.
MCBEE, FRANK W., JR.—Spot Welding of Titanium Alloy Sheet, 469-s to 474-s.
MCINTIRE, H. O.—Ferrite-Grain-Size Measurements for Ship Plate Steel, 78-s to 90-s; Authors' Closure, 94-s.
MIEKK-OJA, H. M.—The Nature of Cleavage Fracture in Steel, 493-s to 501-s.

NEHL, FRANZ—Weldable Low-Alloy Steels for Pressure Vessels, 231-s to 232-s.
NELSON, F. G., JR.—The Strength and Ductility of Welds in Aluminum Alloy Plate, 397-s to 402-s.
NEWMARK, N. M.—Brittle Strength and Transition Temperature of Structural Steel, 515-s to 521-s.
NIPPES, ERNEST F.—Projection Welding of Steel in Heavy Gages and in Dissimilar Thicknesses, 113-s to 125-s.
Seam Welding of 0.005-In. Inconel Sheet, 366-s to 370-s.

OROWAN, E.—*Stress Concentrations in* Steel Under Cyclic Load, 273-s to 282-s.

PELLINI, W. S.—Discussion, "Fracture Initiation and Propagation in Welded Ship Steels," 200-s to 201-s.
Embrittlement of High-Strength Ferritic Welds, 521-s to 526-s.
Initiation and Propagation of Brittle Fracture in Structural Steels, 561-s to 581-s.
Factors Which Determine the Performance of Aluminum Alloy Weldments, 596-s to 606-s.
POOLE, L. K.—The Continuous Cooling Transformation of Weld Heat-Affected Zones, 421-s to 430-s.
PRIVOZNIK, L. J.—The Effect of Stresses on the Strength of Circumferentially Welded Cylinders, 587-s to 595-s.
PUZAK, PETER P.—Embrittlement of High-Strength Ferritic Welds, 521-s to 526-s.
Initiation and Propagation of Brittle Fracture in Structural Steels, 561-s to 581-s.

RIEPPEL, P. J.—Fracture Initiation and Propagation in Welded Ship Steels, 188-s to 197-s; Authors' Reply, 200-s; 201-s.
ROBERTSON, JAMES B., JR.—Discussion, "Stress Studies of Bulkhead Intersections for Welded Tankers," 76-s.
ROOP, WENDELL P., CAPT.—Discussion, "Stress Studies of Bulkhead Intersections for Welded Tankers," 75-s to 76-s.
Discussion, "Welded Reinforcement of Openings in Structural Steel Members," 180-s to 181-s.
Discussion, "Upper and Lower Transitions in Charpy Tests," 202-s to 203-s.
Discussion, "Dimensional Effects in Fracture," 271-s; Author's Reply, 271-s to 272-s.
Discussion, "Stress Concentrations in Steel Under Cyclic Load," 502-s to 504-s.
Discussion, "Transition from Ductile to Brittle Behavior in Pressure Vessel Steels," 623-s; Authors' Reply, 623-s to 624-s.
ROSENTHAL, D.—The Effect of Strain-Rate on Twinning and Brittle Fracture, 475-s to 492-s.
RUZEK, JAN M.—Repeated Load Tests on Welded and Prestrained Steels, 238-s to 246-s.

SCHAEFFLER, A. L.—Hydrogen in Mild-Steel Weld Metal, 283-s to 309-s.
SEABORN, L. O.—Evaluation of the Circular-Patch Weld Test, 387-s to 392-s.

SHRUBSALL, ARTHUR E.—Predetermination of Preheat and Postheat for Submerged-Arc Welding, 1-s to 10-s.
SOETE, W.—A Study of the Fatigue Strength of Welded Joints, 100-s to 103-s.
STEINBERGER, A. W.—Studies of the Crack Sensitivity of Aircraft Steels, 527-s to 542-s.
STODDEN, K. J.—Discussion, "Ferrite-Grain-Size Measurements for Ship Plate Steel," 92-s to 94-s.
STOOP, J.—Studies of the Crack Sensitivity of Aircraft Steels, 527-s to 542-s.
STOUT, ROBERT D.—Repeated Load Tests on Welded and Prestrained Steels, 238-s to 246-s.
Porosity in Mild Steel Weld Metal, 381-s to 386-s; 406-s to 420-s.
SYMONDS, P. S.—Discussion, "Welded Continuous Frames: Plastic Design and the Deformation of Structures," 33-s to 36-s.

TER BERG, J.—Melting Rate of Coated Electrodes, 268-s to 271-s.
THIELSCH, HELMUT—Creep and Stress-to-Rupture Properties of Pressure Vessel Steels, 11-s to 19-s.
Stainless-Steel Weld Deposits on Mild and Alloy Steels, 37-s to 64-s.
Stainless Clad Steels, 142-s to 160-s.
Hydrogen in Mild-Steel Weld Metal, 283-s to 309-s.
Stainless-Steel Applied Liners, 321-s to 337-s.
Transition from Ductile to Brittle Behavior in Pressure Vessel Steels, 371-s to 380-s.
THOMAS, R. DAVID, JR.—Welding of High-Alloy Castings, 27-s to 32-s.
THORPE, MERLE L.—Basic Flame Studies and Their Relationship to Welding Equipment, 465-s to 468-s.
TOPRACTSOGLOU, A. A.—Connections for Welded Continuous Portal Frames—Progress Report No. 4—Welded Continuous Frames and Their Components, 543-s to 560-s.
TÖR, SADUN S.—Repeated Load Tests on Welded and Prestrained Steels, 238-s to 246-s.
TUCKER, J. T., JR.—Biaxial Fatigue Tests on Flat-Plate Specimens, 161-s to 168-s.

UDIN, H.—Surface Tension and the Joining of Metals, 247-s to 252-s.
Brazing Hydromechanics, 310-s to 316-s.

VAN CROMBRUGGE, R.—A Study of the Fatigue Strength of Welded Joints, 100-s to 103-s.
VANDERBECK, R. W.—Discussion, "Ferrite-Grain-Size Measurements for Ship Plate Steel, 92-s to 94-s.
Discussion, "Upper and Lower Transitions in Charpy Tests," 201-s to 202-s.
VASARHELYI, D.—Welded Reinforcement of Openings in Structural Steel Members, 169-s to 180-s; Authors' Closure, 182-s to 183-s.
VASTA, JOHN—Discussion, "Stress Studies of Bulkhead Intersections for Welded Tankers," 76-s.
VOLDRICH, C. B.—Fracture Initiation and Propagation in Welded Ship Steels, 188-s to 197-s; Authors' Reply, 200-s. 201-s.

WARREN, DONALD—Porosity in Mild Steel Weld Metal, 381-s to 386-s; 406-s to 420-s.
WECK, R.—Fatigue Strength of Panels with Welded Angle Stiffeners, 338-s to 349-s.
WEISKOPF, WALTER H.—Behavior of an Idealized Steel H column Above the Elastic Range, 353-s to 360-s.
WELLS, A. A.—Heat Flow in Welding, 263-s to 267-s.
WELTY, JOHN W.—Effect of Vibration on Weld Metal, 361-s to 366-s.
WENTWORTH, R. P.—Temper Brittleness in Low-Alloy Steel Weld Metal, 505-s to 514-s.
WOODING, W. H.—Discussion, "Fracture Initiation and Propagation in Welded Ship Steels," 198-s to 200-s.
WOOLSEY, C. C., JR.—The Effect of Strain-Rate on Twinning and Brittle Fracture, 475-s to 492-s.
WYLIE, R. D.—Creep and Stress-to-Rupture Properties of Pressure Vessel Steels, 11-s to 19-s.

YANG, CHING HUAN—Residual Stress and the Yield Strength of Steel Beams—Progress Report No. 5—Welded Continuous Frames and Their Components, 205-s to 229-s.

AN OPPORTUNITY —is presented to all AWS Membership and Industry to secure back numbers of The Welding Journal Bound Volumes at very low cost

Effective now, a limited supply of the following BOUND VOLUMES are available at the prices shown

Year	*Price	Year	*Price
1930	$4.00	1938	$4.00
1931	4.00	1948	8.00
1932	4.00	1949	8.00
1933	4.00	1950	10.00
1934	4.00	1951	12.00

*Plus Postage

Each consists of the twelve (12) issues of that year's JOURNALS, each volume attractively bound in imitation black leather covers. These are valuable additions to your engineering and welding library.

Place order now with the AMERICAN WELDING SOCIETY, 33 West 39th Street, New York 18, N. Y. Add 3% sales tax on N.Y.C. orders.
